REVERSE TRANSCRIPTASE INHIBITOR

Patent Number:

JP6293645

Publication date:

1994-10-21

Inventor(s):

SANEYOSHI MINERO; others: 01

Applicant(s)::

MINERO SANEYOSHI; others: 01

Requested Patent:

JP6293645

Application Number: JP19930083391 19930409

Priority Number(s):

IPC Classification:

A61K31/70

EC Classification:

Equivalents:

PURPOSE:To obtain a reverse transcriptase inhibitor having a strong inhibitory effect on a reverse

transcriptase produced by HIV and useful for improvement and prevention of AIDS and for suppression or retardation of the crisis after infection with AIDS virus.

CONSTITUTION: There is provided a reverse transcriptase inhibitor containing 2'-deoxy-L-ribonucleotide-5'-triphosphate, preferably 2'-deoxy-L-thymidine-5'- triphosphate as the active component and having a strong inhibitory effect on a reverse transcriptase produced by retrovirus. This compound can be produced by converting an L-nucleotide (an optical antipode of a natural type nucleotide) into its monophosphate, e.g. in the presence of phosphorus oxychloride and subsequently synthesizing its corresponding 5'-triphosphate compound therefrom, e.g. according to phosphorimidazolidate method. This compound is also useful as a regent for studies in the fields of biochemistry, genetic engineering etc. useful as a regent for studies in the fields of biochemistry, genetic engineering etc.
